

One platform for all your video security needs.

Get intelligent with the IoT platform of the future.

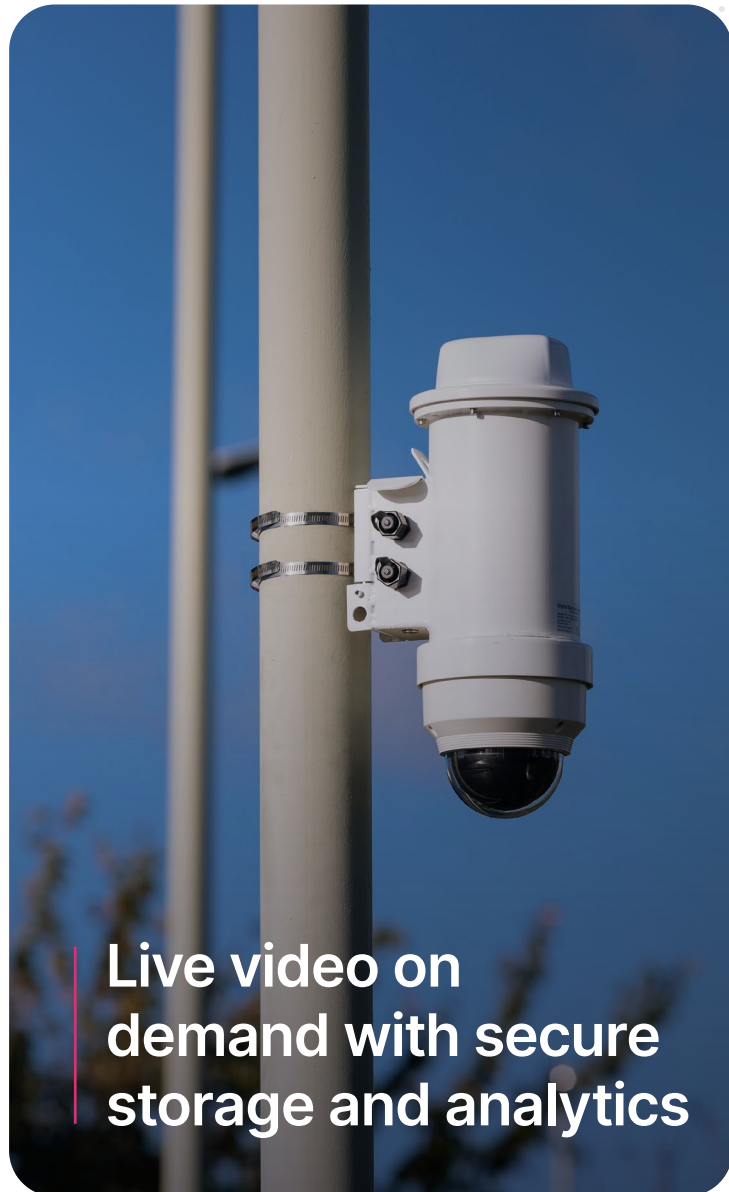

Simple. Scalable. Plug and play.

The concept of CloudVis is simple: an IoT platform providing the only true VSaaS solution for cellular and fixed networks.

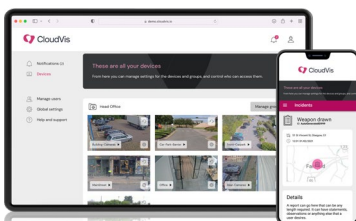

CloudVis is web-based, and combines live video on demand with secure storage and powerful analytics. Whether you're plugging in to outdoor CCTV, bodyworn cameras or even smartphone apps, our IoT platform has you and your entire network covered and connected.

Bandwidth-friendly technology ensures you will not suffer from buffering or latency issues when streaming over cellular connections, meaning no important footage will ever be missed. Our cloud-based infrastructure ensures you only pay for what you use, meaning a lower cost of ownership as well as no surprise data charges.

CloudVis is camera agnostic too, which means you can connect any device, new or old, making it an essential part of networks where security, insight and scalability are paramount. And because CloudVis is scalable on demand, you can be reassured that it will grow with your organization.

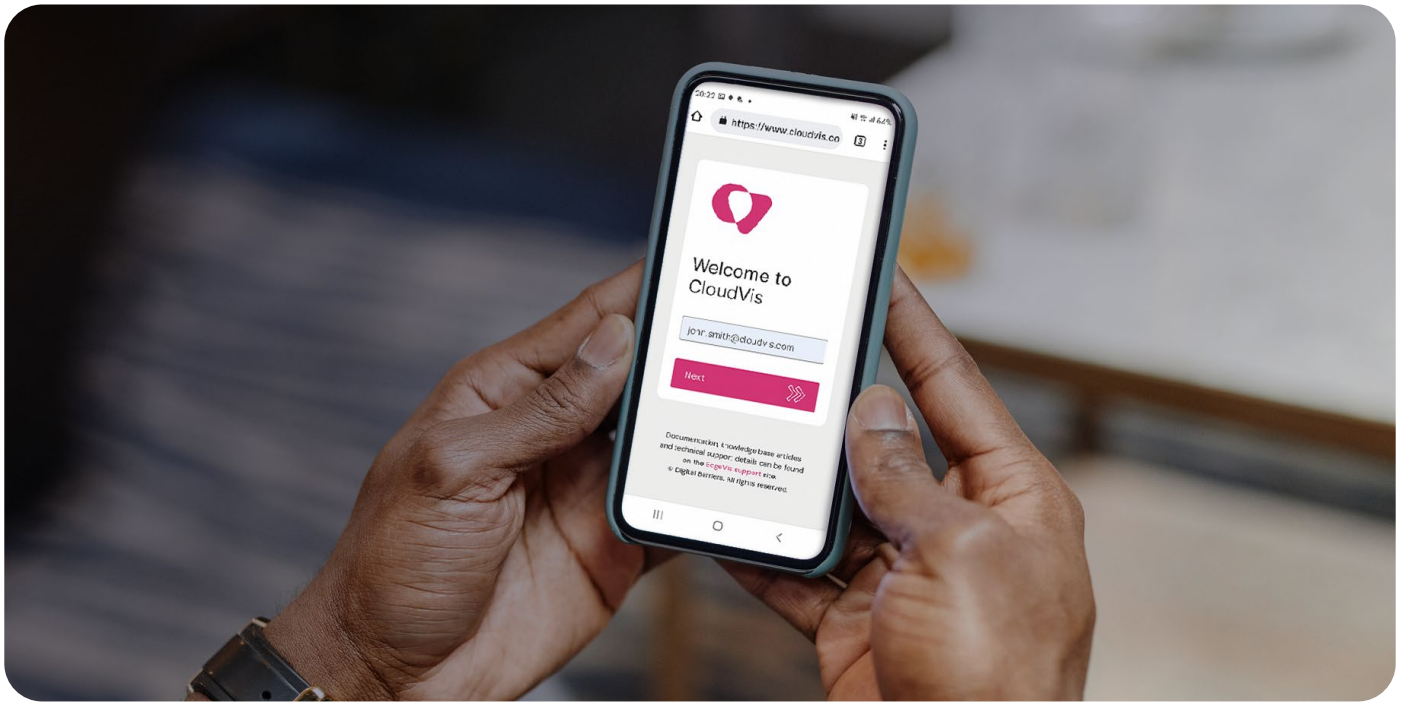

Live video on demand with secure storage and analytics

CloudVis gives you the flexibility to manage all of your cameras from a unified view, whilst working seamlessly across any connected device.

Trusted. Tested. Proven.

Seamless and secure

The CloudVis platform is designed with end-to-end encryption, ensuring that your video and analytics data is protected throughout your organization. Firmware updates ensure you're protected against threats, and they're automatic too, so no troublesome maintenance.

Intelligent insight

CloudVis utilizes cutting-edge AI analytics, making any camera in your network smart, even legacy devices. This means you can access a range of feature-rich functionality without the need for costly hardware upgrades.

Low bandwidth? No problem

Whatever the quality of your network or the location of your cameras, CloudVis delivers high-quality video with unique low-bandwidth technology. Stream video and audio over low-speed connections, whether cellular or fixed.

One platform, endless insight.

Features

- Complete end-to-end encryption to the highest standard

- A simple to use interface allowing you to find and share footage securely

- Cutting-edge AI analytics with rich alerting features

- Multi-streaming capability: stream multiple feeds from the same device without impacting quality

- All firmware and software patches are updated automatically removing the need of having to replace outdated hardware

Benefits

- It's bandwidth friendly, whether you're streaming over a fixed or cellular connection

- Suitable for every type of business, from education to enterprise

- Available through a trusted partner network such as Vodafone and AT&T

Integration and compatibility

- Intuitive plug-and-play – no need for complex configuration

- Supports your existing video hardware including legacy devices

- Connect to multiple end points including fixed and deployable CCTV cameras, mobile CCTV cameras and Body Worn cameras

- Easy setup: just scan the QR code and you're good to go

- CloudVis devices only connect to the cloud and do not need special firewall rules or VPN connections for remote viewing

- No need for expensive DVR/NVRs and on-premise server racks

- Pay for what you use: You can keep your Total Cost of Ownership (TCO) significantly lower through our simple monthly payment plans
